(54) Title: NAVIGATION METHOD AND NAVIGATION SYSTEM

(57) Abstract: The invention relates to a method to assist navigation in particular in regions the user of the navigation system is relatively well familiar with, comprising the steps of providing a digitized map, determining a static route based on at least two waypoints and static road information from a digitized map or by uploading a route, determining a dynamic route based on static road information from the digitized map and dynamic information and outputting navigation information. The invention is further directed to a navigation system comprising input means for inputting data, data storage means for storing data, in particular a digitized map, dynamic information receiving means for receiving dynamic information data, data processing means for providing navigation information and outputting means for outputting navigation information, in particular optical and acoustical means, wherein the data processing means is designed such that a static route is determined based on at least two waypoints and static road information from a digitized map or by uploading a route and a dynamic route is determined based on static road information from the digitized map and dynamic information.
